SocialInsider	26 May–24 June 2026

Additional Notes

- The dataset relies on third-party data from SocialInsider, so its accuracy and completeness can't be fully guaranteed.
- Limited access to advanced metrics (such as audience demographic and follower growth) may affect the depth of analysis.

Tools

Python for data cleaning and analysis

Google Sheets for data analysis

Google Data Studio for data visualization

Right-skewed performance distribution requires median-based evaluation to reduce outlier impact.

Key Insights

✓ The distributions of both views and engagement are **heavily right-skewed**, indicating that performance is concentrated in a small number of high-performing posts rather than being evenly distributed.

✓ Given this skewness, the **median provides a more reliable measure**, as it minimizes distortion from viral outliers and better represents the typical content performance.

Engagement metrics strongly drive views, while posting frequency plays a secondary role.

Key Insights

- Views showed strong correlations with engagement metrics, especially Saves (0.93) and Likes (0.89), indicating these metrics closely reflected content performance.
- Number of Posts had only a moderate correlation with views and engagement, suggesting posting frequency was not the main performance driver.

Key Takeaway

Content quality and audience interaction were more influential in driving performance than posting volume.

Key Impact

Focus on quality over quantity to improve audience reach and overall performance.

Key Insights

- High content volume generated substantial views and engagements, but the low average engagement rate (2.17%) indicated limited audience interaction beyond viewing.
- Kumparan achieved the strongest performance, leading in posts, views, and engagements, while Pikiran Rakyat showed relatively lower content effectiveness.

Key Takeaways

- Content volume alone does not guarantee strong engagement.
- Content effectiveness plays a key role in driving audience interaction.

Key Impact

Media platforms should optimize content strategies based on performance quality, not only increase posting volume.

Performance varied over time, driven by content effectiveness rather than posting frequency.

Daily Views

Daily Engagement

Key Insights

- ✔ Posting frequency did not consistently drive views or engagement, indicating that volume alone was not a reliable performance factor.
- ✔ Daily performance fluctuated, with specific events causing temporary spikes in views and engagement.

Weekend posts and 3–5 AM uploads showed higher median views.

Prime Day

Prime Time

Key Insights

 Weekend postings generated higher median views compared to weekdays.

 Posts published at 3–5 AM achieved the strongest median views.

Key Takeaway

Posting timing influenced views performance, with specific periods showing higher content visibility.

Key Impact

Optimize posting schedules by prioritizing high-performing days and time windows to maximize views.

Optimal video duration around 336 seconds drove higher views and engagement.

Video Duration by Median Views

Video Duration by Median Engagement

Key Insights

- Content around 336 seconds generated the highest median views and engagement.
- Both shorter and longer durations showed weaker performance, indicating lower value delivery for shorter videos and potential audience fatigue for longer ones.

Key Takeaway

Video duration plays an important role in balancing audience retention and content value.

Key Impact

Optimize video length around high-performing durations (336, 421, 498, and 517 s) to improve reach and engagement.

Top-performing content was driven by timely international and high-momentum events.

Top 5 Content by Views

Key Insights

- ✔ High-performing content was largely influenced by recent events and trending topics.
- ✔ International topics and disaster-related content generated stronger views due to relevance, controversy, and urgency.

Key Takeaway

Timeliness and emotional appeal were key factors driving content performance.

Key Impact

Prioritize timely, relevant, and high-momentum topics to maximize audience reach and engagement.

Timely and relevant topics, such as international and economic issues, drove higher audience engagement.

Top 5 Content by Engagements

Sebut Nama Hormuz Jadi Selat Trump, Presiden AS Bikin Kontroversi Lagi

TAPI MEREKA HARUS MEMBUKANYA

Viral Beringin Raksasa Roboh di TPU Malang, Jenazah Sampai Terangkat

HARGA BBM NONSUBSIDI NAIK

BOJAN HODAK SEBUT BALI UNITED MENYULITKAN PERSIB, DAN JAWAB KRITIK KE BARROS

Key Insights

✔ High-engagement content was also dominated by recent issues with strong interpretive and personal impact.

✔ International and economic topics generated higher engagement due to their relevance to audience concerns.

Key Takeaway

Content that connects with audience interests and daily experiences drives stronger interactions.

Key Impact

Develop content strategies around timely issues with clear audience relevance to increase engagement.

Recommendations	Key Finding	Recommended Action	Expected Impact
 Prioritize Momentum-Driven Content	Top-performing content was largely momentum-driven, as most topics were tied to recent or ongoing events.	Focus on momentum-driven topics (e.g., international politics, disasters, and economic) as since they consistently drive both high views and engagement.	Higher views and engagement potential.
 Prioritize Posting on Prime Day and Time	Videos published at weekends and 3–5 AM generated higher median views.	Optimize posting timing, especially weekends and early morning (3–5 AM), which showed stronger median views performance.	Higher views and engagement potential.
 Prioritize Medium to Long Duration Videos	Video with medium to long duration (around 336 s) generated higher median views and engagement.	Standardize video duration around 336 seconds, decrease production of short and very long video.	Higher views potential.
 Prioritize Content Quality over Quantity	Number of posts daily had moderate correlation with views and engagement.	Shift strategy from posting volume to content quality and relevance, since frequency alone has weaker impact compared to topic strength and content effectiveness.	More effiecient resources allocation and sustainable views and engagement growth.
